

How can Custom Safety & Engineering help?

Below is a list of services Custom Safety & Engineering (CustomSE – (Custom Safety Pty Ltd)) can provide. Don't be afraid to contact CustomSE if the assistance you need is not on this list

Audit / Inspection

A qualified auditor can be engaged to review your management systems through paper based audits or practical implementation audits. Workplace practices, amenities and facilities can be audited or inspected. CustomSE can also assist in the development of inspection systems and employees can be coached on conducting workplace inspections.

Risk Management

An experienced risk management system developer can design a risk management system to suit the needs of your business. We can review your risk management system and provide advice on opportunities for improvement. A risk assessment facilitator can assist your business in identifying key risks and develop programs to assist in the control of these risks. Remember a good risk management system can save your business and employees from the cost of workplace incidents.

Project Management

The team at CustomSE have experience at managing and facilitating the success of large projects to ensure on time and on budget delivery to the satisfaction of the client.

Incident Investigation / Review

A thorough and complete incident investigation is critical to preventing a repeat incident and controlling causal and contributing factors. CustomSE can provide a professional incident investigator to assist your business in identifying these factors. Have you ever conducted analysis of the incidents in your workplace to see what is hurting your employees, costing you valuable time (productivity) and money (profit)? CustomSE can assist in incident trend analysis.

Management System Development and Review

CustomSE can provide professional assistance in developing and reviewing your management systems including policies, standards and procedures. Ask yourself how user friendly are your management systems? Do you require compliance with ISNet or other contractor pre-qualification systems? CustomSE can assist you in improving your rating.

Injury Management Services

We can provide a professional qualified in Workplace Injury Management and Occupational Rehabilitation to assist in the design and review of your return to work, injury management and rehabilitation programs. A qualified return to work coordinator can also help support the return to work of injured employees. Are you working closely with your insurer, doctors and is your employee engaged in their return to work program?

Training and Development Review

The development of employees is essential to the productivity of your business. Training and development can assist in preventing incidents. Training needs analysis can be performed for your team with the engagement of key supervisors. Training management systems can be reviewed and assistance provided in developing training packages to meet the needs of your business.

Contractor Management Systems & Pre-qualification Processes

Contractor management systems can be developed and reviewed. Audit and inspection schedules can be developed and undertaken. How well do you manage the safety of your contractors? Or are you contracting and require compliance with ISNet or other contractor pre-qualification systems? CustomSE can assist you in improving your rating.

Professional Relief (Engineering and Safety)

While you may think we are superhuman all Safety & Engineering professionals need a break. CustomSE can provide short-term contract relief to cover the needs of your business.

Professional Coaching

With senior management experience leading large teams of professionals CustomSE can engage your safety and engineering professionals in one on one coaching sessions. Are you able to dedicate the time to developing your safety professionals (graduates/advisors).

Small Business Safety

CustomSE can develop, review or audit your Small Business Work Health and Safety Management Systems. Or we can provide guidance to help point you in the right direction to develop your own WHSMS.

General OHS & Electrical Engineering Advice

The safety world can be somewhat overwhelming and stretches far out into the universe, not to mention the technicality of the electrical engineering field. CustomSE is passionate about workplace safety and engineering, if you have a question please don't hesitate to ask. CustomSE don't profess to know it all but are happy to help you find the answer or the person who knows it!
